

## Medieval 2 Total War Unpacker

DOWNLOAD: <https://bytly.com/2imibq>

lib into your game's root folder. 4. Convert the html, css and js files into xml, css, and js respectively. 5. Copy the files that were unzipped from the game files into the mygrails directory. You will want to rename these files to the mygrails mod, because you will need to download them again for the next step. 6. Open up the system variable window and add in the following: "" export JAVA\_HOME=/cygdrive/c/Program Files/Java/jdk1.8.0\_65 export GRAILS\_HOME=/cygdrive/c/mygrails 7. Add the following to the file c:/users//bashrc and save it. If you are on Windows, add it to the file C:\users%\bashrc. GRAILS\_HOME=/cygdrive/c/mygrails 8. Add the following to the file c:/users//bash\_profile and save it. If you are on Windows, add it to the file C:\users%\bash\_profile. source "\$GRAILS\_HOME/scripts/bash\_profile" 9. Start the MyGrails IDE and open the BuildConfig.groovy file. Make sure you have the correct class path for your Grails install. If you don't have the correct class path, you will see something like this: classpath: grails-app/D:/mygrails/apache-maven-3.3.3-src/plugins/org.grails.plugins:tomcat5:3.3.3/lib/ Change it to the path to your Grails install. 82157476af
